# B.Sc., COMPUTER SCIENCE & INFORMATION TECHNOLOGY

#### **SYLLABUS**

FROM THE ACADEMIC YEAR
2023 - 2024

#### 1. Introduction

#### **B.Sc.Computer Science & Information Technology**

Education is the key to development of any society. Role of higher education is crucial for securing right kind of employment and also to pursue further studies in best available world class institutes elsewhere within and outside India. Quality education in general and higher education in particular deserves high priority to enable the young and future generation of students to acquire skill, training and knowledge in order to enhance their thinking, creativity, comprehension and application abilities and prepare them to compete, succeed and excel globally. Learning Outcomes-based Curriculum Framework (LOCF) makes it student-centric, interactive and outcome-oriented with well-defined aims, objectives and goals to achieve. LOCF also aims at ensuring uniform education standard and content delivery across the state which will help the students to ensure similar quality of education irrespective of the institute and location.

Computer Science is the study of quantity, structure, space and change, focusing on problem solving, application development with wider scope of application in science, engineering, technology, social sciences etc. throughout the world in last couple of decades and it has carved out a space for itself like any other disciplines of basic science and engineering. Computer science is a discipline that spans theory and practice and it requires thinking both in abstract terms and in concrete terms. Nowadays, practically everyone is a computer user, and many people are even computer programmers. Computer Science can be seen on a higher level, as a science of problem solving and problem solving requires precision, creativity, and careful reasoning. The ever-evolving discipline of computer science also has strong connections to other disciplines. Many problems in science, engineering, health care, business, and other areas can be solved effectively with computers, but finding a solution requires both computer science expertise and knowledge of the particular application domain. Computer science has a wide range of specialties. These include Computer Architecture, Software Systems, Graphics, Artificial Intelligence,

Computational Science, and Software Engineering. Drawing from a common core of computer science knowledge, each specialty area focuses on specific challenges. Computer Science is practiced by mathematicians, scientists and engineers. Mathematics, the origins of Computer Science, provides reason and logic. Science provides the methodology for learning and refinement. Engineering provides the techniques for building hardware and software.

The Students completing this programme will be able to present Software application clearly, make abstract ideas precise by formulating them in the Computer languages. Completion of this programme will also enable the learners to join teaching profession, enhance their employability for government jobs, software industry, banking, insurance and investment sectors, data analyst jobs and jobs in various other public and private enterprises.

|                        | LEARNING OUTCOMES-BASED CURRICULUM FRAMEWORK GUIDELINES BASED REGULATIONS FOR UNDER GRADUATE PROGRAMME  |  |  |  |  |  |
|------------------------|---|--|--|--|--|--|
| Programme:             | B.Sc., Computer Science & Information Technology  |  |  |  |  |  |
| Programme<br>Code:     |   |  |  |  |  |  |
| Duration:              | 3 years [UG]  |  |  |  |  |  |
| Programme<br>Outcomes: | PO1: Disciplinary knowledge: Capable of demonstrating comprehensive knowledge and understanding of one or more disciplines that form a part of an undergraduate Programme of study  PO2: Communication Skills: Ability to express thoughts and ideas effectively; Communicate with others using appropriate media; confidently share one's views; demonstrate the ability to listen carefully, read and write analytically, and present complex information in a clear and concise manner to different groups.  PO3: Critical thinking: Capability to apply analytic; analyse and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence; identify relevant assumptions or implications; formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development.  PO4: Problem solving: Capacity to extrapolate from what one |  |  |  |  |  |

has learned and apply their competencies to solve different kinds of non-familiar problems and apply to real life situations.

**PO5: Analytical reasoning**: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyze and synthesize data; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.

**PO6:** Research-related skills: A sense of inquiry and capability for asking relevant/appropriate questions, synthesising and articulating; Ability to recognise cause-and-effect relationships, define problems, formulate and test hypotheses, analyse, interpret and draw conclusions from data, establish hypotheses, predict cause-and-effect relationships; ability to plan, execute and report the results of an experiment or investigation

**PO7: Cooperation/Team work:** Ability to work effectively and respectfully with diverse teams; facilitate cooperative or coordinated effort on the part of a group, and act together as a group or a team in the interests of a common cause and work efficiently as a member of a team

**PO8: Scientific reasoning**: Ability to analyse, interpret and draw conclusions from quantitative/qualitative data; critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.

**PO9:** Reflective thinking: Critical sensibility to lived experiences, with self-awareness and reflexivity of both self and society.

**PO10 Information/digital literacy:** Capability to use ICT in a variety of learning situations, demonstrate ability to access, evaluate and use appropriate software for analysis of data.

**PO 11 Self-directed learning**: Ability to work independently, identify appropriate resources required for a project, and manage a project through to completion.

**PO 12 Multicultural competence:** Possess knowledge of the values and beliefs of multiple cultures and a global perspective; and capability to effectively engage in a multicultural society and interact respectfully with diverse groups.

**PO 13: Moral and ethical awareness/reasoning**: Ability to embrace moral/ethical values in conducting one's life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Capable of demonstrating the ability to identify ethical issues, avoid unethical behaviour such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights; appreciating environmental and

sustainability issues; and adopting objective, unbiased and truthful actions in all aspects of work.

**PO 14: Leadership readiness/qualities:** Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination, in a smooth and efficient way.

**PO 15: Lifelong learning:** Ability to acquire knowledge and skills, including learning "how to learn", through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives, and adapting to changing trades and demands of work place through knowledge/skill development/reskilling.

#### Programme Specific Outcomes:

**PSO1**: To enable students to apply basic microeconomic, macroeconomic and monetary concepts and theories in real life and decision making.

**PSO 2**: To sensitize students to various economic issues related to Development, Growth, International Economics, Sustainable Development and Environment.

**PSO 3**: To familiarize students to the concepts and theories related to Finance, Investments and Modern Marketing.

**PSO 4**: Evaluate various social and economic problems in the society and develop answer to the problems as global citizens.

**PSO 5:** Enhance skills of analytical and critical thinking to analyze effectiveness of economic policies.

|       | PO 1 | PO2 | PO3 | PO4 | PO5 | P06 | PO7 | PO8 |

#### S - Strong, M- Medium, L- Low

#### Highlights of the Revamped Curriculum:

> Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive

- examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- > The Core subjects include latest developments in education and scientific front, practical training, devising mathematical models and algorithms for providing solutions to real life situations. The curriculum also facilitates peer learning with advanced mathematical topics in the final semester, catering to the needs of stakeholders with research aptitude.
- ➤ The General Studies and Mathematics based problem solving skills are included as mandatory components in the Training for Competitive Examinations' course at the final semester, a first of its kind.
- > The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- > The Industrial Statistics course is newly introduced in the fourth semester, to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.
- > The Internship during the second year vacation will help the students gain valuable work experience that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- ➤ Project with viva-voce component in the fifth semester enables application of conceptual knowledge to practical situations. The innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.
- > State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest.

#### Value additions in the Revamped Curriculum:

#### Exercises:

- 1. Working with Classes and Objects
- 2. Using Constructors and Destructors
- 3. Using Function Overloading
- 4. Using Operator Overloading
- 5. Using Type Conversions
- 6. Using Inheritance
- 7. Using Polymorphism
- 8. Using Console I/O
- 9. Using Templates
- 10. Using Exceptions

#### TOTAL 75

| CO  | Course Outcomes   |
|-----|---|
| CO1 | Understand the fundamentals of C++ programming structure  |
| CO2 | Identify the basic features of OOPS such as classes, objects, polymorphism, inheritance   |
| CO3 | Analyze the concept of inheritance with the understanding of early and late binding, usage of exception handling, constructors, destructors, generic programming and type conversions |
| CO4 | Determine the use of various data structures such as stacks, queues and lists to solve va computing problems in C++ by incorporating OOPS concepts.                                   |
| CO5 | Develop a program in C++ with the concepts of object oriented programming to solve problems.  |

#### **Elective Course: EC1 A: NUMERICAL METHODS**

#### **COURSE OBJECTIVE:**

L T P C 4 0 0 3

1. To introduce the concept of solving equations using different methods

2. To understand the use of Assignment and Transportation problems

#### Unit I:

Curve Fitting: Introduction, Method of Least squares, Curve Fitting, Fitting a Straight Line

#### Unit II:

Solution of Algebraic and Transcendental Equations: Bisection method, Regula Falsi method, Newton Raphson Method

#### Unit III:

Solution of Simultaneous Linear Equations: Solution of Simultaneous Linear Equations: Gauss Elimination method, Gauss-Jordan method, Gauss Seidel Method, Jacobi's method

#### **Unit IV:**

Numerical Differentiation & Integration: Differentiation: Using Newton's Forward Difference, Newton's Backward Difference, Newton's Divided Difference (First Order Differentiation only)

Integration: Using Trapezoidal rule, Simpson's 1/3 & Simpson's 3/8 rules

#### Unit V:

Solution of Ordinary Differential Equations: Runge-Kutta 2nd Order and4th Order methods, Predictor-Corrector Methods: Milne and Adam's methods.

#### **COURSE OUTCOME:**

On successful completion of the course, the learners will be able to

- 1. Obtain numerical solutions of algebraic and transcendental equations
- 2. Solve system of linear equations numerically using direct and iterative methods
- 3. Solve ordinary differential equations
- 4. Compute integration using Simpson's & Trapezoidal Rule
- 5. Apply numerical methods in real life problems

#### **COURSE OUTCOMES**

On Successful completion of the course, the student will be able to

☐ CO1: To recall basic concepts for clear understanding of mathematical principles

☐ CO2: To explain practical problems.

UCO2: To explain practical problems.

□ CO3: To construct matrices using discrete mathematics

☐ CO4: To analyze techniques to draw graph using mathematics

☐ CO5: To design graphs using the representations

#### **Unit – I: RELATIONS**

12 Hours

Introduction to Relations – Binary relation – Classification of Relations – Composition of Relations – Inverse of Relation – Closure operation on Relations – Matrix representation of Relation - digraphs.

**Unit – II: FUNCTIONS** 

12 Hours

Introduction to Functions – Addition and Multiplication of Functions - Classifications of Functions – Composition of Function – Inverse Function.

**Unit – III: MATHEMATICAL LOGIC** 

12 Hours

Introduction – Statement (Propositions) – Laws of Formal Logic –Basic Set of Logical operators/operations - Propositions and Truth Tables – Algebra Propositions - Tautologies and Contradictions – Logical Equivalence – Logical Implication – Normal Forms.

Unit – IV: MATRIX ALGEBRA

12 Hours

Introduction – Definition of a Matrix - Types of Matrices – Operations on Matrices – Related Matrices – Transpose of a Matrix – Symmetric and Skew-symmetric Matrices – Complex Matrix

Conjugate of a Matrix – Determinant of a Matrix – Typical Square Matrices – Adjoint and Inverse of a Matrix – Singular and Non-singular Matrices – Adjoint of a Square Matrix – Properties of Adjoint of a Matrix – Properties of Inverse of a Matrix.

**Unit – V: GRAPH** 

12 Hours

Introduction – Graph and Basic Terminologies – Types of Graphs – Sub Graph and Isomorphic Graph – Operations on Graphs – Representation of Graph.

| 1            | Write a Java program that prompts the user for an integer and then prints out all the prime numbers up to that Integer                |             |      |       |       |       |         |             |        |          |       |
| 2            | Write a Java program to multiply two given matrices.  |             |      |       |       |       |         |             |        |          |       |
| 3            | Write a Java program that displays the number of characters, lines and words in a text  |             |      |       |       |       |         |             |        |          |       |
| 4            | Generate random numbers between two given limits using Random class and print messages according to the range of the value generated. |             |      |       |       |       |         |             |        |          |       |
| 5            | Write a program to do Strin perform the following string a. String length   | g Manipula  | tion |       |       |       |         |             | and    |          |       |

|    | b. Finding a character at a particular position  |          |
|----|--|----------|
|    | c. Concatenating two strings   |          |
| 6  | Write a program to perform the following string operations using String class:  a. String Concatenation b. Search a substring c. To extract substring from given string  |          |
| 7  | Write a program to perform string operations using String Buffer class:  a. Length of a string b. Reverse a string c. Delete a substring from the given string   |          |
| 8  | Write a java program that implements a multi-thread application that has three threads. First thread generates random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number. |          |
| 9  | Write a threading program which uses the same method asynchronously to print the numbers 1to10 using Thread1 and to print 90 to100 using Thread2.  |          |
| 10 | Write a program to demonstrate the use of following exceptions.  a. Arithmetic Exception b. Number Format Exception c. ArrayIndexOutofBoundException d. NegativeArraySizeException   |          |
| 11 | Write a Java program that reads on file name from the user, then displays information about whether the file exists, whether the file is readable, whether the file is writable, the type of file and the length of the file in bytes  |          |
| 12 | Write a program to accept a text and change its size and font. Include bold italic options. Use frames and controls.   | 60       |
| 13 | Write a Java program that handles all mouse events and shows the event name at the center of the window when a mouse event is fired. (Use adapter classes).  |          |
| 14 | Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -,*, % operations. Add a text field to display the result. Handle any possible exceptions like divide by zero.  |          |
| 15 | Write a Java program that simulates a traffic light. The program lets the  |          |
| L  |  | <u> </u> |

|    | user select one of three lights: red, yellow, or green with radio buttons.   |                              |  |  |  |  |  |  |  |  |
|----|--|------------------------------|--|--|--|--|--|--|--|--|
|    | On selecting a button, an appropriate message with "stop" or "ready" or  |                              |  |  |  |  |  |  |  |  |
|    | "go" should appear above the buttons in a selected color. Initially there  |                              |  |  |  |  |  |  |  |  |
|    | is no message shown.   |                              |  |  |  |  |  |  |  |  |
|    | Total  | 60                           |  |  |  |  |  |  |  |  |
|    | Course Outcomes  | <b>Programme Outcome</b>     |  |  |  |  |  |  |  |  |

### **EC2: Elective Course 2 A OPTIMIZATION TECHNIQUES**

### Course objectives:

- 1. To apply various optimization techniques for decision making.
- 2. To introduce the use of variables for formulating complex mathematical models in management, science and industrial applications

#### **Course Outcome:**

On successful completion of the course, the learners will be able to CO1. Formulate and solve Linear Programming Problems.

CO2. Analyze the usage of Sequencing Problems.

CO3. Evaluate Queueing Models.

CO4. Apply PERT and CPM techniques to find the optimal solution.

UNIT I 12 hours

#### INTRODUCTION-LINEAR PROGRAMMING PROBLEM

The Nature and Meaning of OR – Management – Applications of OR – Modeling in OR – General methods for solving OR models – Scope of OR.

Linear Programming Problem: Formulation of LP problems – Graphical solution of LP problems – General formulation of LPP – Slack and Surplus variables – Standard form of LPP – Some important forms of LPP – Simplex Method I.

UNIT II 12 hours

#### ASSIGNMENT PROBLEMS

Assignment Problem: Mathematical formulation–Hungarian method– Unbalanced assignment problem – Various types

UNIT III 12 hours

#### TRANSPORTATION PROBLEMS

Transportation Model: Mathematical formulation – Matrix form–Methods for finding Initial Basic Feasible solution and Optimal solution – Degeneracy in Transportation Problems – Unbalanced Transportation Problem.

UNIT IV 12 hours

### SEQUENCING PROBLEMS AND QUEUING MODELS

Sequencing Problems: Assumptions – Solutions to Sequencing Problems: Processing n jobs through 2 machines – Processing n jobs through 3 machines – Processing n jobs on m machines.

Queuing Models: Queuing System – Transient and Steady States– Kendal's Notation for representing Queuing Models – Various Models in Queuing System - Birth and Death Model.

UNIT V 12 hours

### PERT AND CPM TECHNIQUES

PERT and CPM Techniques: Basic Steps – Network Diagram representation— Rules for drawing Network Diagram – Labeling Fulkerson's I–J Rule – Time Estimates and Critical Path in Network Analysis – Examples on optimum duration and minimum duration cost – PERT.

**CO-PO -PSO Mapping**

| I                   | Basics of Excel- Customizing common options- Absolute and relative cells- Protecting and un-protecting worksheets and cells- Working with Functions - Writing conditional expressions - logical functions - lookup and reference functions- VlookUP with Exact Match, Approximate Match- Nested VlookUP with Exact Match- VlookUP with Tables, Dynamic Ranges- Nested VlookUP with Exact Match- Using VLookUP to consolidate Data from Multiple Sheets |  |        |        |       |       | 6       |             |          |          |       |
| II                  | Data Validations - Specifying a valid range of values - Specifying a list of valid values- Specifying custom validations based on formula - Working with Templates Designing the structure of a template- templates for standardization of worksheets - Sorting and Filtering Data - Sorting tables- multiple-level sorting- custom sorting-   |  |        |        |       |       |         |             |          |          |       |

|     | Filtering data for selected view - advanced filter options-<br>Working with Reports Creating subtotals- Multiple-level<br>subtotal.  |                    |
|-----|--|--------------------|
| III | Creating Pivot tables Formatting and customizing Pivot tables- advanced options of Pivot tables- Pivot charts-Consolidating data from multiple sheets and files using Pivot tables- external data sources- data consolidation feature to consolidate data- Show Value As % of Row, % of Column, Running Total, Compare with Specific Field-Viewing Subtotal under Pivot- Creating Slicers. | 6                  |
| IV  | More Functions Date and time functions- Text functions-Database functions- Power Functions - Formatting Using auto formatting option for worksheets- Using conditional formatting option for rows, columns and cells- What If Analysis - Goal Seek- Data Tables- Scenario Manager.   | 6                  |
| V   | Charts - Formatting Charts- 3D Graphs- Bar and Line Chart together- Secondary Axis in Graphs- Sharing Charts with PowerPoint / MS Word, Dynamically- New Features Of Excel Sparklines, Inline Charts, data Charts- Overview of all the new features.   | 6                  |
|     | Total  | 30                 |
| СО  | Course Outcomes On completion of this course, students will  | Programme Outcomes |
| CO1 | Work with big data tools and its analysis techniques.  | PO1                |
| CO2 | Analyze data by utilizing clustering and classification algorithms.  | PO1, PO2           |
| CO3 | Learn and apply different mining algorithms and recommendation systems for large volumes of data.  | PO4, PO6           |
| CO4 | Perform analytics on data streams.   | PO4, PO5, PO6      |

| CO5 | Learn No-SQL databases and management.                    | PO3, PO8 |  |  |  |  |  |  |  |

|         | <b>Introduction:</b> Notion of algorithms and programs – Requirements for solving problems by computer – The problem-solving aspect: Problem definition phase, Getting started on a problem, The use of specific examples, Similarities among problems, Working backwards from the solution – General problem-solving strategies - Problem solving using top-down design – Implementation of algorithms – The concept of Recursion. |  |      |       |           |          |         |             |         | 6               |       |  |
|         | <b>Fundamental Algorithms</b> : Exchanging the values of two variables – Counting - Summation of a set of numbers - Factorial computation - Sine function computation - Fibonacci Series generation - Reversing the digits of an integer – Base Conversion.   |  |      |       |           |          |         |             |         | 6               |       |  |
|         | <b>Factoring Methods</b> : Finding the square root of a number – The smallest divisor of an integer – Greatest common divisor of two integers - Generating prime numbers – Computing the prime factors of an integer – Generation of pseudo-random numbers - Raising a number to a large power – Computing the <i>n</i> th Fibonacci number.  |  |      |       |           |          |         |             | 6       |                 |       |  |
|         | <b>Array Techniques</b> : Array order reversal – Array counting or histograming – Finding the maximum number in a set - Removal of duplicates from an ordered array - Partitioning an array – Finding the $k^{\rm th}$ smallest element – Longest monotone subsequence.   |  |      |       |           |          |         |             |         | 6               |       |  |

| V  | Text Processing and Pattern Searching: Text line length adjustment – Left and right justification of text – Keyword searching in text – Text line editing – Linear pattern search. Recursive algorithms: Towers of Hanoi – Permutation generation. |               |         |  |  |  |  |  |  |
